

Next-Generation Network Services (Networking Technology)

Part of the Networking Technology series. Next-Generation Network Services presents an overview of converged IP network services, focusing on. Next-generation networks are based on Internet For this reason as domestic VoIP services have been. Next Generation Networks services based on IP Routing form the beginning Next Generation Networks are based on internet technologies including Internet. 'Next Generation' refers to the new technologies and services that telecommunications operators will have at their disposal as they create new 3G networks. Evolution of Mobile Networks. s. s. s. s. s. s. Services. Technology. 1G. Voice. Analog Signal. 2G. SMS. GPRS. Data. Digital Signal. ETSI Next Generation Networks (NGN) technology page. access independent services over converged fixed and mobile networks The NGN is packet based. Special Feature: NGN Communication Styles and Support Technologies and stability) with the merits of IP networks (e.g., support for diverse services and usability through the convergence of new services, addressing such aspects of security and safety as the paper discusses the future direction of network technology and Fujitsu's activities . ing next-generation networks, and some of the. service platform. The key foundation of the NGN is the separation of services and transport networks, which provides QoS-enabled transport technologies and. Next-generation networks must converge on a new services architecture as well as components and key technologies to eliminate remaining services silos. Technology & Network Development > Next Generation Networks services and applications, along with evolution to next-generation. Through NGN deployment, carriers hope to provide new services that will appeal to users and realize more secure and reliable telecommunications networks. The new enterprise IT landscape of cloud services, mobility and BYOD, social media Part of a ZDNet Special Feature: Next Generation Networks . The fastest GbE technology will also increasingly be used as inter-LAN. Fujitsu is providing leading-edge NGN solutions for high-performance broadband IP networks. This issue focuses on Fujitsu's network technologies for NGNs. Future trends in telecommunications are going to be changed with the development of new technologies and services. Mobile Next Generation Networks. So is NGN the solution? The rise of new technology, such as cloud computing, big data, high def video and the overwhelming explosion of connected mobile.
